TECNOLOGIAS DE INFORMAÇÃO

## CONSULTING

**At SAFIRA, we recognize that an IT project's success is measured only by tangible business results. Our consulting services bring to your organization an exclusive and rare combination of talent for clear understanding of business goals, deep technological expertise, breadth of vision and focus on achievement.**

Work closely with our senior consultants and partners. The direct and close involvement of SAFIRA's top people in your critical initiatives and projects is our commitment and assurance of your success.

While dedicated to solving higher order issues and consistently rethinking how technology best serves business problems, our Consultants still work regularly in implementations projects, close to development teams. This practice makes all the difference when it comes to delivering feasible, effective and viable advice to IT decision making.

### Development Consulting

We advise organizations on how to streamline in-house and outsourced development projects, based on our own years of experience in working closely with IT departments. We help establish a sound and efficient project framework, tailored to your organization's needs and processes that produce significant benefits:

### Enterprise Architecture Consulting

The benefits, as well as the hard challenges, of agile application interoperability and integration are well known of every CTO of a complex organization. In such organizations, the proliferation of disparate and heterogeneous systems that need to interoperate in order to build an agile and connected enterprise is a common scenario. This interoperability is a key factor in leveraging the existing applications to quickly respond to new and changing business drivers, and to rationalize the usage of IT resources.

SAFIRA has a significant history of working in integration projects with many different systems and technologies. This history has given us a thorough understanding of enterprise applications and of infrastructure and architectural issues of application integration. Our Architects can offer you expert advice on how to design, plan and build a solid enterprise-class architecture that enables agile interoperability between disparate heterogeneous systems.

### Business Case Consulting

When it comes to solving a specific business problem, SAFIRA has the knowledge and experience to find the most adequate technical solutions. Since the problem definition and scoping, through analysis, requirements specifications and implementation guidelines, a team of SAFIRA's highly qualified Consultants, Architects and Analysts provides your team with the required technical skills to assist you in finding the most effective solution. Involvement of our Consultants during the early stages of the problem definition has significant benefits.

### ABOUT SAFIRA

SAFIRA develops solutions and provides IT services to leading companies in the national and international market. We provide engineering services to advise, audit, architect, conceive and manage IT systems that support the companies' business. Founded in 1997, SAFIRA has more than 50 active customers and a team of 120 highly qualified professionals.
