AGILE DEVELOPMENT

As an OutPartner, SAFIRA has the skills, certifications and experience needed to successfully develop web and mobile custom applications using the OutSystems Agile Platform and Agile Methodology.

ABOUT SAFIRA

SAFIRA develops solutions and provides IT services to leading companies in the national and international market. We provide engineering services to advise, audit, architect, conceive and manage IT systems that support the companies' business. Founded in 1997, SAFIRA has more than 50 active customers and a team of 120 highly qualified professionals.

The **Agile Platform** is a complete solution for the development and management of custom enterprise web and mobile applications that are built to change at the speed of business. IT teams around the world use the Agile Platform to develop, deploy, manage and change web applications that are robust, ready to scale and based on standard technology, ensuring no vendor lock-in. **Benchmarks show that customers using the Agile Platform deliver their custom web applications 10.9x faster than with other technologies and toolsets available in the market.** Introduced in 2001, the OutSystems Agile Platform has over 20,925 installations across 22 different industries, has received multiple CODiE, CRN and JOLT awards and is supported by an active community of more than 6,033 active members, 1,549 certified practitioners and 56 implementation partners.

Regarding the methodology, industry surveys reveal that 53% of software projects end up over budget and overdue. This is closely related to the rigid nature of traditional project methodologies and their inadequacy to cope with the extreme change environment that businesses face today. OutSystems suggests a different approach to project organization and control based on agile methods. The OutSystems Agile Methodology addresses this need for speed and continuous change, delivering applications that truly respond to business needs. OutSystems has leveraged the main SCRUM concepts and has adapted them to suit the particular nature of projects based on the OutSystems Agile Platform. Projects following the OutSystems Agile Methodology are sequences of iterations, called Sprints, at the end of which a demonstration of the current version of the application is done. Sprints take between 1 and 2 weeks and include Analysis, Development, and Testing. The end of each Sprint represents a formal interaction point in the project to demo the application, gather feedback, and negotiate the features that will be implemented in the next Sprint.

outpartner

OutSystems' Agile Platform allows to:

- > Deliver enterprise web and mobile applications fully integrated with existing systems
- > Speed-up application delivery by developing applications using a visual environment
- > Deploy new enterprise web and mobile applications across with a single click
- > Manage all applications centrally and with a small IT team
- > Continuously change applications with no impact, in any stage of their lifecycle
- > Deliver integrated business processes with speed and flexibility)

With a strong history of success in applying methodology and development best practices, SAFIRA is the right partner to help accelerate ROI and leverage your legacy systems.
